Monetary Policy Review

The Reserve Bank's neutral monetary policy stance remained unchanged in the past six months.

The recovery in the global economy continues to advance, however remains uneven. In many advanced economies, growth remains subdued and unemployment rates are still very high. In contrast, activity in many emerging economies remains buoyant, inflationary pressures are rising, and there are signs of overheating driven in part by strong capital inflows. The International Monetary Fund (IMF) has estimated that the world economy will grow by 4.4 percent in 2011, a fall from 5 percent growth in 2010. In the United States (US), the pace of recovery has picked up on the back of easing financial conditions and increased private demand. Nevertheless, improvement in the labor market remains slow. Economic activity in Europe remains below potential level and unemployment is still high. In contrast, the Chinese economy continues to grow strongly and is expected to remain robust in the next two years. In Australia, economic activity expanded at a solid pace in the second half of 2010, due to high demand for Australian commodities, supporting business investment. However, in December 2010 and early 2011, economic activity was disrupted by the floods across Australia, causing a significant decline in coal production over recent months and heavy damage to crops. Despite the adverse impact of the floods on the external sector, Australia's employment growth continues to be strong and business conditions remain positive. The modest and weaker economic growth in New Zealand was exacerbated by the impact of the Christchurch earthquake in February 2011. Consumer and business confidence are likely to be reduced, and economic uncertainty could see households trim spending and firms delay investment plans. To lessen the economic impact of the earthquake, the Reserve Bank of New Zealand reduced the official cash rate by 50 basis points to 2.5 percent in March 2011.

The primary monetary policy objectives of the National Reserve Bank of Tonga (NRBT) continues to focus on maintaining an adequate level of foreign reserves and promoting price stability. In the past six months, the level of foreign reserves continued to remain well above 4 months of import cover mainly due to foreign aid inflows, credit constraints on domestic demand and deferred import payments. Consequently, liquidity in the banking system continued to remain at a high level. Despite the availability of excess liquidity in the banking system, banks' credit growth to the private sector continued to contract with banks containing tight lending conditions. Headline inflation increased over the past six months reflecting the rise in world oil prices, imported and domestic food prices, and increase in the imported tobacco and alcohol tax rate. Given the high level of liquidity in the banking system, monetary policy continued to be accommodative in the past six months. However, the desired outcome of the monetary policy measures continued to be muted by the banks' balance sheets consolidation and focusing on recovering of non performing loans. Consequently, credit growth continued to contract.

Foreign reserves remained high at comfortable levels, despite declining at the beginning of the year. The high level of foreign reserves was underpinned by the receipts of government aid funds from Tonga's development partners as well as deferred import payments. Nevertheless, the high capital outflows contributed to the fall in foreign reserves over the past three months. At the end of March 2011, official foreign reserves amounted to \$157.1 million, equivalent to 6.4 months of imports compared with \$172.7 million (7.1 months of imports) at the end of September 2010.

Private sector credit growth contracted by 9.4 percent over the year to February 2011 compared to the 13.1 percent contraction in the year ended August 2010. The contraction in credit growth was mainly due to the banks' balance sheet consolidation process and the write off of bad debts. However, if the disbursement of the reconstruction loan from the People's Republic of China was channeled through the banking system and accounted for, the overall credit growth to the private sector would have increased by 17.9 percent during the year ended February 2011.

Inflation has increased in the past six months, reaching 6.9 percent in the year ended January 2011 before it eased to 6.5 percent in the year ended February 2011. The rising world oil prices and global food prices, and the imposition of government excise tax on imported tobacco and alcohol in July 2010, contributed to the escalation in imported inflation. Imported food and imported fuel dominate the CPI basket and price fluctuations in these items have a major influence on the overall inflation in Tonga.

Table 1. Monetary Policy Indicators

	Dec 2009	Mar 2010	Jun 2010	Aug 2010	Dec 2010	Feb 2011

apc = annual percent change

Outlook

Domestic economic activity is expected to be underpinned by foreign aid funded construction and infrastructure projects. However, the uncertainty in the economic outlook remains. Despite the recovery in the global economy, unemployment remains high in the major remittance source countries particularly in the United States. The floods in Australia, the earthquake in Christchurch, and the earthquake and tsunami in Japan are likely to affect remittances and tourism in Tonga. The level of gross foreign reserves is expected to remain above 4 months of imports and inflation is expected to rise as a result of the increase in oil and food prices. Against this background, the current neutral monetary policy stance will be maintained in the next six months.

Foreign reserves are projected to fall in the next six months but will remain at adequate levels, above 4 months of import cover. Exports are forecast to remain low and remittances are expected to remain weak as the unemployment in the major remittance source countries, especially the United States, remains high. Import payments are projected to rise consistent with the rebound in oil and food prices and as deferred import payments are made. Combined with capital outflows especially debt repayments, these will exert downward pressure on foreign reserves.

Despite the ample liquidity in the banking system, credit by banks will remain limited in the next six months as banks will continue to tighten the lending standards, given the focus to improve their balance sheets and the uncertainty about the economic prospects. Large construction and infrastructure projects are being financed mainly by foreign aid from Tonga's development partners. As such, the foreign reserves will be supported by foreign aid expected to be received in the next six months therefore liquidity in the banking system is expected to be more than adequate.

Headline inflation is estimated to increase in the next six months as world oil prices and global food prices continue to rise. The appreciation in the NZ dollar against the Tongan pa'anga and the expected pick up in domestic demand from the construction activities will contribute to inflationary pressures while the appreciation of the pa'anga against the US dollar will contribute to dampen the inflationary impact of the rising world oil price.

The Reserve Bank will continue to maintain the country's foreign reserves position at an adequate level, and promote low inflation, mindful of the downside risks to the outlook. The uncertainty in the global economy and the high unemployment rates in the major remittance source countries especially in the United States, the rising oil and food prices and increased capital outflows will all exert downward pressure on the foreign reserves.

The Reserve Bank will continue to closely monitor the country's economic and financial conditions in order to preserve an adequate level of foreign reserves, maintain price stability and promote a sound and efficient financial system.

Siosi C. Mafi
Governor

1. International Economic Developments

Major Economies

The recovery in the global economy continues to gain strength despite the high unemployment in advanced economies and new macroeconomic risks building in the emerging market economies. The improvement in the global economy combined with disruptions to supply has led to increase in global commodity prices in recent months. This increase in commodity and food prices is adding to global inflationary pressures.

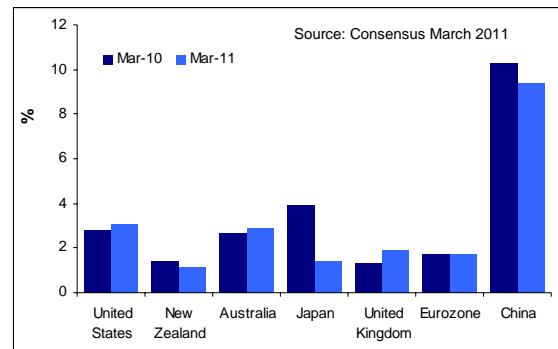

In the United States, the GDP growth increased by 3.1 percent in annualized terms in the December quarter of 2010 driven by positive contributions from personal consumptions expenditure, exports and investment. The federal funds interest rate remained unchanged at 0.25 percent, which signaled that the economy is improving gradually amid the moderate improvement in consumer spending and manufacturing activities.

In Europe, concerns about the sustainability of public finances in a number of countries have increased. Monetary policies in most European economies have been accommodative for as long as inflation pressures remain subdued.

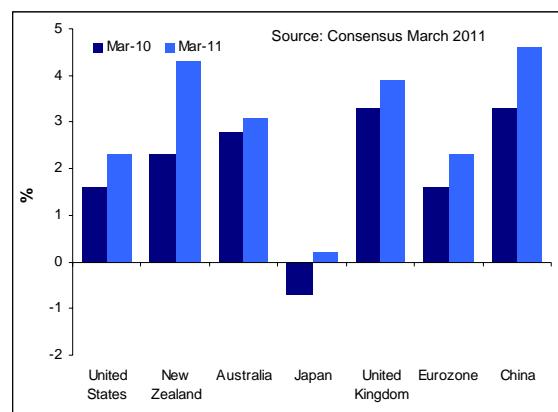

In Japan, the economy contracted by 1.3 percent in the fourth quarter of 2010 due to downward revision to capital investment and consumer spending. As the reconstruction activity will be on its way following the earthquake and tsunami, it would see the economy bounce back toward the end of 2011.

The Chinese economy has grown strongly, accelerated by 9.8 percent in the December quarter 2010 as industrial production and retail sales rose. Inflation rose to 4.6 percent in December due to rises in food prices. The authorities are now emphasizing more on rebalancing the economy by becoming more reliant on domestic consumption as a key driver of activity.

Source: Consensus Forecasts & Asia Pacific March 2011

The Australian economy expanded by 0.7 percent in the December quarter of 2010 driven by inventories, consumption expenditure and capital expenditure on machinery and equipment. It is expected that the impact of the floods and cyclone which hit Australia in early 2011 will have a negative impact on economic growth for the March quarter 2011. The Reserve Bank of Australia maintained its benchmark interest rate at 4.75 percent with headline CPI moderated to 2.7 percent. Inflation is expected to rise due to losses of crop and commodities production although efforts to rebuild the economy should limit the fallout.

In New Zealand, the economy expanded by 0.5 percent in 2010, much weaker than had been projected, even before the February earthquake. Nevertheless, it is expected that the Christchurch reconstruction, the recovery in business confidence, and the upcoming Rugby World Cup in September 2011 will bolster economic activity. The Reserve Bank of New Zealand reduced the official cash rates by 50 basis points to 2.5 percent in March 2011, to help cushion the economy from the adverse effects of the Christchurch earthquake.

World oil prices (Brent crude) averaged around US\$111.48 per barrel in March 2011 compared to an average of US\$76.30 per barrel in September 2010 and US\$79.67 per barrel in March 2010. It is expected that growth in the Chinese economy and the US recovery are likely to keep supporting the oil price above US\$100 per barrel.

On a trade-weighted basis, the nominal effective exchange rate (NEER) depreciated by 0.1 percent over the year to March 2011, reflecting the weakening of the Tongan pa'anga against the currencies of its major trading partners except US dollar (Appendix 1). Furthermore, the Real Effective Exchange Rate (REER) rose by 3.2 percent over the year to December 2010.

Pacific Economies

Most Pacific economies namely, Vanuatu, Solomon Islands and Papua New Guinea have continued to improve further in the six months to February 2011 but at a slower pace.

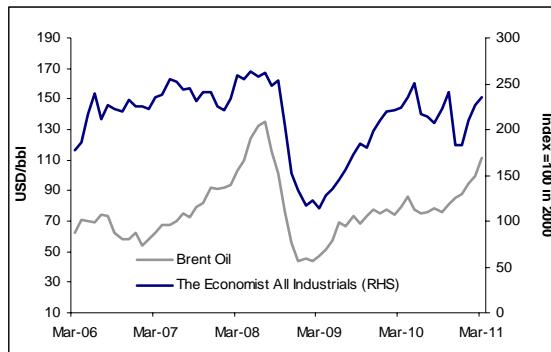

The increase in international commodity prices has benefited Papua New Guinea, Vanuatu and Solomon Islands from their exports of logs and minerals.

Positive growth had also shown in domestic consumption in Fiji and Vanuatu due to the increase in tourist arrival. In Samoa, remittances improved but the decline in tourism and export earnings combined with increase in imports,

resulted in an overall deficit in the balance of payments.

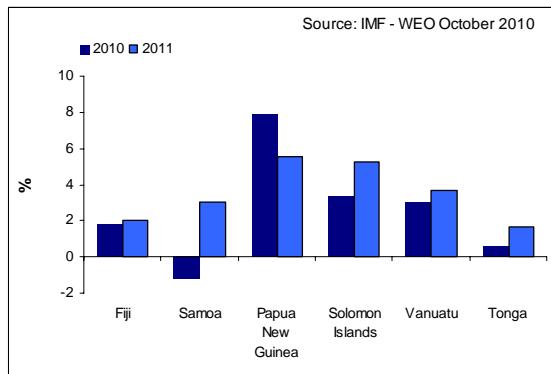

Despite high liquidity in most pacific island economies, credit growth remained slow as demand for credit subdued. Inflation increased over the year to February 2011 mainly driven by the rise in international commodity prices. The impact of imposing VAT on all categories in the consumer basket in Fiji also contributed to the rise in Fiji's inflation rate.

2. Review of the Tongan Economy

Growth in Tonga's Economy

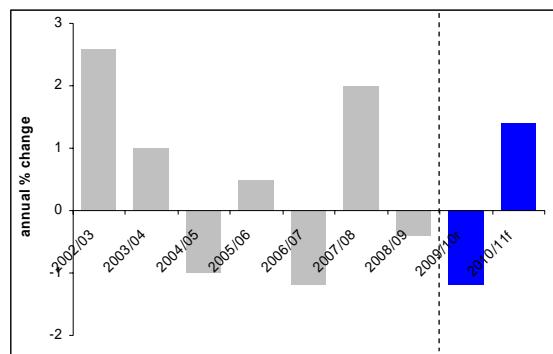

Economic growth was estimated by the Ministry of Finance in its Budget Statement 2010/11 to rebound slowly in 2010/11 compared to a contraction of 1.2 percent in 2009/10. However, there has been indication from the Ministry of Finance that the estimate on GDP growth for 2010/11 will be revised down.

Activity in the construction sector improved in the second half of 2010 due to the ongoing and new construction and infrastructure projects in the Kingdom. These projects funded by aid from Tonga's development partners include the reconstruction of Vuna Wharf, the construction of the last phase of Vaiola Hospital, the renovation of the Royal Palace, reconstruction of Tungi Arcade and infrastructure development. The construction projects completed in the past six months included the Taumoepeau, Royco and Sanft Buildings. Other private constructions including new church buildings also contributed to the expansion in the construction sector activity.

According to the surveys by the Reserve Bank, vehicle registrations rose by 11 percent in the six months to February 2011 compared to 35 percent increase in the same period of last year. The container registrations increased by 18 percent in the six months to February 2011 compared to 24 percent increase in the corresponding period a year ago. This is mainly due to the increase in the imported construction materials for the ongoing construction activities in the Kingdom. Most of the containers arrived from New Zealand, Tonga's main source of imports.

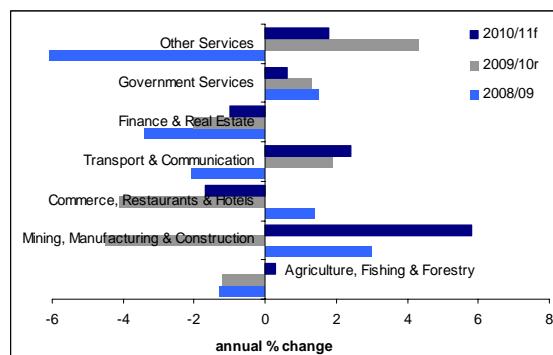

The tourism sector continued to improve in the last six months, reflected by the increase in tourist receipts and pick up in tourist arrivals. The total arrivals into the Kingdom which includes air and cruise ship arrivals, and returning nationals increased by 50 percent in the six months to September 2010 compared to 40 percent decline in the previous six months. Majority of visitors who arrived in Tonga were from New Zealand and Australia. Earnings from tourism reported in the OET increased by 18 percent in the six months to February 2011, higher than the 11 percent increase in the six months to August 2010.

2.1 Economic growth (GDP)

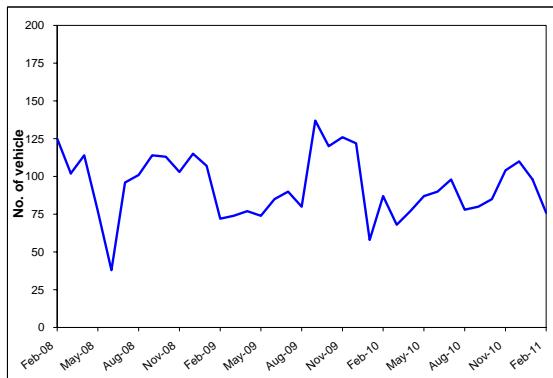

Source: Statistics Department & Ministry of Finance

2.2 Economic Growth by Sector

Source: Statistics Department & Ministry of Finance

2.3 Vehicle Registrations

Source: Ministry of Transport

According to the Statistics Department latest Trade Report, performance in the agricultural sector improved slightly in the September Quarter 2010 compared to the previous quarter. Exports of agricultural products mainly taro (swamp and taro tarua), cassava, and fish and other marine products increased in the September quarter 2010 from the previous quarter. However, according to the OET, exports in the six months to February 2011 declined, mainly due to the fall in other marine exports, reflecting lower proceeds from sea cucumber exports.

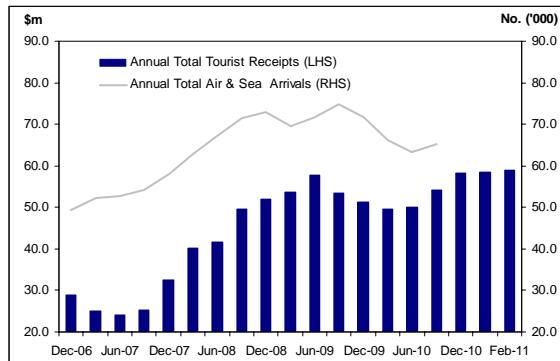

Outlook

Economic activities are expected to pick up, driven by the construction and infrastructure activities in the country. The tourism sector is expected to continue improving, supported by the aid funds from Tonga's development partners. It is anticipated that with the completion of the Vuna Wharf in 2012, the number of cruise ships visiting the Kingdom will increase further.

The agricultural sector is expected to improve, supported by the new agro-processing and post harvest plant in Tongatapu and Vava'u. According to the Growers' Federation, it is envisaged that with the new bio-security and quarantine facilities, the exports of taro, watermelon and coconut are likely to double this year. However, the outlook for the fishing sector is cloudy, underpinned by the reduction in sea cucumber exports and the decline in fish stocks affected by the continuing climate change.

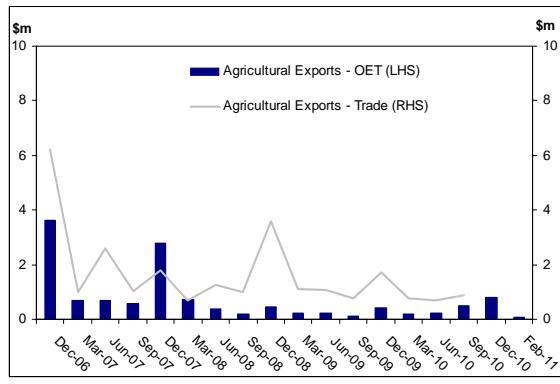

The growth prospect for the Tongan economy will continue to remain weak in the next six months given the uncertainty in the global economy, high unemployment rates in the main remittance source countries particularly the United States, the rising world oil and food prices and the country's vulnerability to natural disasters. Moreover, the decline in Government revenues will further hinder economic growth. At the same time, spillover effects from Queensland's massive flooding, Christchurch's earthquake and Japan's tsunami will affect the outlook for the Tongan economy in terms of trade and tourism.

3. Review of Monetary Conditions

Money Supply

Total broad money (M3) remained high, rising by 1.9 percent in the year ended February 2011 to \$318.2 million, higher than the average level of \$295 million in the past five years. However, it has fallen from a peak of \$334.2 million in December 2010 reflecting a fall in demand deposits which have been utilized to support domestic demand and consistent with the fall in foreign reserves.

Liquidity in the banking system fell to \$53.3 million at the end of February 2011 from \$66.3 million in August 2010. The decline in liquidity was mainly due to import payments and capital outflows.

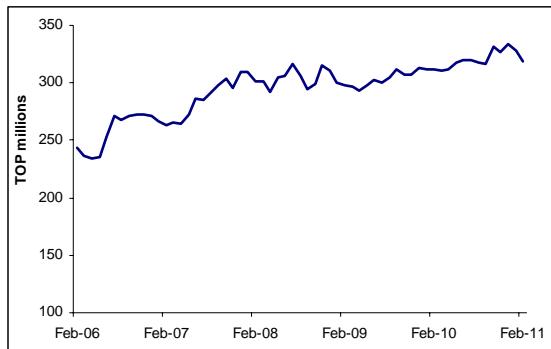

Private Sector Credit Growth

Total private sector credit growth in the banking system remained subdued. Credit growth contracted by 9.4 percent in the year ended February 2011, compared to 13.1 percent fall in the year ended August 2010. The contraction in private sector credit growth was mainly due to the fall in lending to the business sector by 13.4 percent in the year ended February 2011. The decline in banks lending to the business sector was largely driven by falls in lending to other services. Household credit declined by 4.8 percent in the year ended February 2011 compared to 3.8 percent fall in the year ended August 2010.

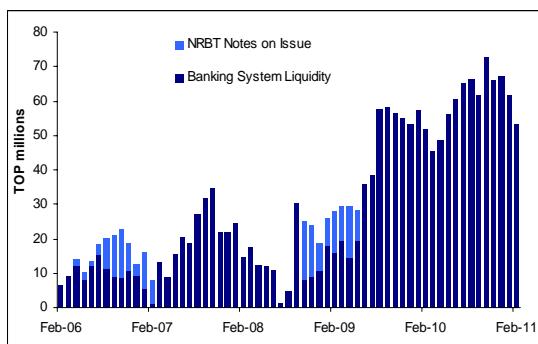

The contraction in private sector credit growth reflected the banks maintaining tight lending conditions in response to the rise in non performing loans. Despite the excess liquidity available in the system, the banks claim that they are not receiving many bankable project proposals which could improve the credit growth. This has hindered the desired outcome of the Reserve Bank's monetary policy measures.

At the end of February 2011, 50 percent of total credit to the private sector was lent to the business sector, while 49.5 percent was lent to the household sector. Lending by the banking system to the business sector has been mostly directed to the wholesale and retail sector.

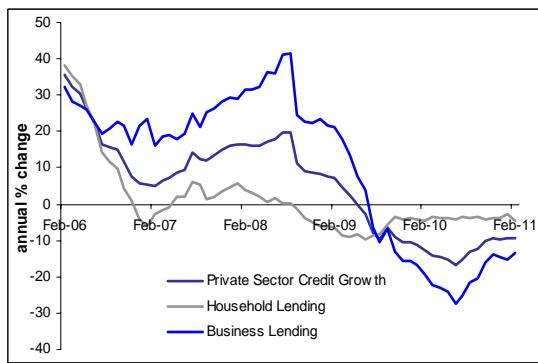

3.1 Money Supply (M3)

3.2 Banking System Liquidity

3.3 Private Sector Credit Growth

Interest Rates

Retail interest rates on deposits have remained relatively stable in the past six months to February 2011 while lending rates slightly declined.

Deposit rates for investors with less than \$50,000 remained unchanged. The 1-month deposit rates remained at 3.48 percent, and the 3-month and 12-month term rates remained at 3.70 and 4.12 percent respectively in the past 6 months to February 2011. The weighted average interest rate on term deposits offered by commercial banks fell to 3.95 percent in February 2011 from 4.0 percent in August 2010 due to the increase in total term deposits. On the contrary, the weighted average interest rates on saving deposits increased to 1.61 percent in February 2011 from 1.58 percent in August 2010 due to the fall in total saving deposits.

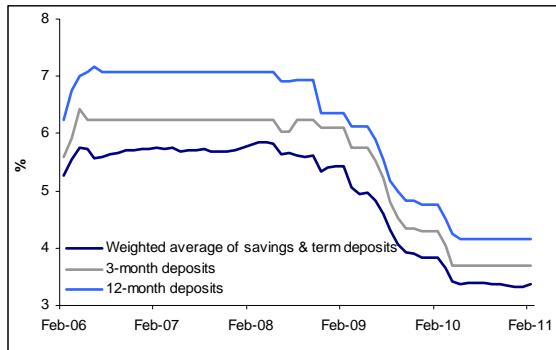

Lending rates fell in the six months to February 2011. The rates for owner-occupied housing fell to 10.51 percent in February 2011 from 10.63 percent in August 2010. The business lending rates also fell to 12.33 percent in February from 12.46 percent in August 2010. The weighted average lending rate fell to 11.40 percent in February 2011 from 11.60 percent in August 2010 due to a slight fall in lending rates.

Outlook

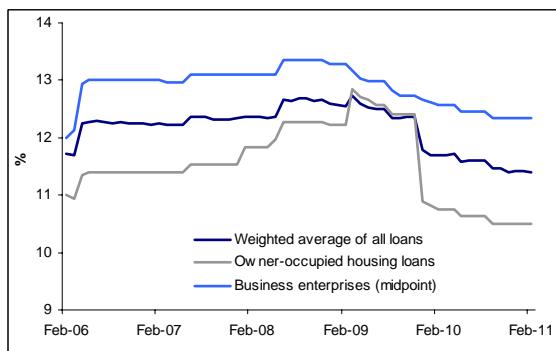

Liquidity in the banking system will continue to remain adequate but expected to decline in the next six months in line with the anticipated fall in foreign reserves.

Credit growth to the private sector is expected to be negative, although at a slower pace with banks likely to maintain tight lending standards to restore the health of their balance sheets. Given the weak domestic economy, and the uncertainty in the economic outlook, growth in lending will remain slow in the next 6 months.

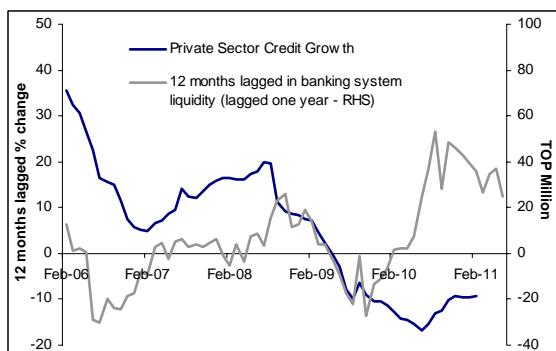

3.4 Retail Deposit Rates (Deposits < \$50,000)

3.5 Lending Rates

3.6 Liquidity and Lending Growth

4. Maintain Adequate Foreign Reserves

Official Foreign Reserves

Gross Official Foreign Reserves have remained high over the last six months, despite falling to \$157.1 million at the end of March 2011 from a high of \$177.5 million at the end of December 2010. Foreign reserves when measured as a ratio of imports have remained above adequate level at 6.4 months of import coverage as at the end of March 2011. The relatively high level of foreign reserves mainly reflected the receipts of foreign aid and the weak economic conditions. The decline in foreign reserves in the six months to March 2011 was mainly due to import payments and capital outflows.

Foreign Exchange Payments

Total payments (OET basis) rose in the past six months to February 2011 by \$11.2 million to \$186.2 million compared to \$175 million in the six months to August 2010, largely due to increase in airline payments, other private services and higher private capital outflow.

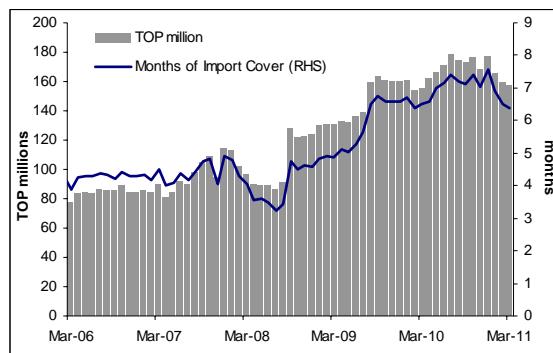

Import payments fell by \$4.5 million to \$114.2 million in the six months to February 2011 from \$118.6 million in the six months to August 2010. However, on an annual basis, import payments increased to \$232.8 million from \$202.1 million a year earlier, mainly due to higher oil payments. Increase in imports of wholesale and retail goods, and construction materials also contributed to the rise in import payments during the year, reflecting the increase in food prices and the construction projects that are currently undertaken in the country.

Foreign Exchange Receipts

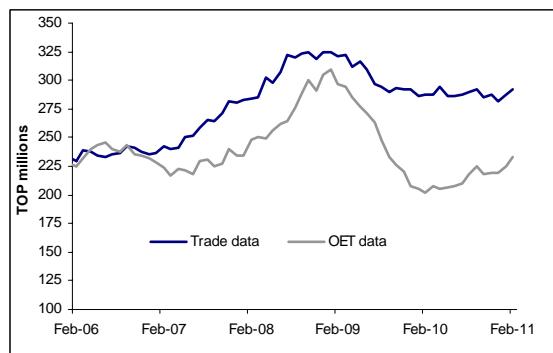

Remittances, the major source of foreign exchange earnings have been relatively weak over the past six months to February 2011 as the unemployment rates in the main remitting source countries especially the United States remain high. However, despite the recent increase in US dollar remittances, the strengthening of the Tongan pa'anga against the US dollar contributed to the fall in remittances in the last six months. In the six months to February 2011, remittances fell to \$75.2 million from \$80.7 million in the six months to August 2010, a 6.7 percent fall compared to the 6.2 percent increase in the previous six months. Remittances fell to a record low of \$8.4 million in the month of January 2011. However, remittances slightly rose by 0.8 percent to \$155.9 million year on year to February 2011 from \$154.6 million in the year to August 2010. More than 50 percent of

the total remittances are received from the United States.

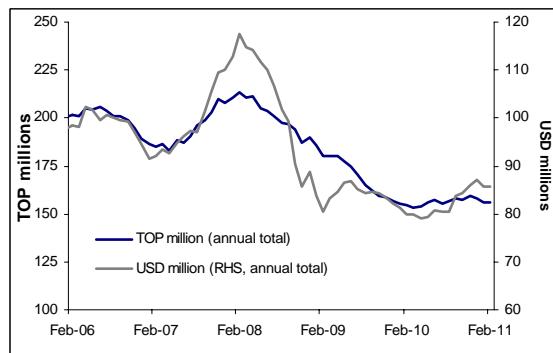

4.1 Official Foreign Reserves

4.2 Import Payments (annual total)

4.3 Remittances

In the year ended February 2011, remittances accounted for the equivalent of 59 percent of total imports compared to 61 percent in the year ended August 2010 and 82 percent in the same period a year earlier. This reflected more of the rise in imports being funded by foreign aid.

Merchandise exports (OET basis) fell to \$3.4 million in the six months to February 2011 from \$5.5 million in the previous six months. In the year ended February 2011, export earnings fell by 19 percent to \$8.9 million from \$12.9 million a year earlier. The decline in exports reflected the fall in both agricultural and fish exports due to a number of factors including failure to meet quality requirements by overseas markets, and unfavorable weather condition. Lower proceeds from sea cucumber exports also contributed to the fall in other marine product exports earnings.

Tourist receipts (OET basis) rose to \$32 million in the past six months to February 2011 compared to \$27 million in the previous six months and \$23 million in the same period a year ago. This is attributed to tourism activities in Vava'u in September and October 2010 and the holiday season during the Christmas period. In the year ended February 2011, receipts from tourism rose to \$59 million from \$50 million a year ago. A large amount of the tourist receipts are from card transactions which are recorded as travel receipts. The underlying source for this classification is being reviewed by the Reserve Bank.

Balance of Payments

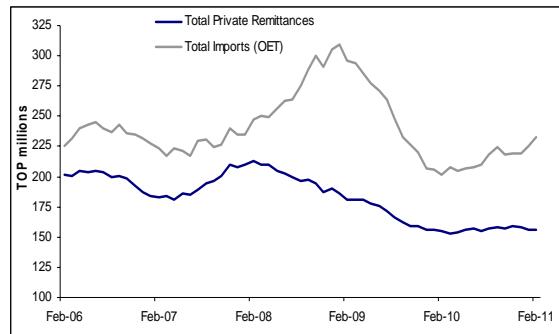

The fall in remittances contributed to the widening in the current account deficit to \$39 million over the past six months to February 2011. However, the capital account rose to \$44 million in the six months to February 2011 from \$37 million in the six months to August 2010, mainly due to the receipts of official grants. In the year ended February 2011, the net capital inflows more than offset the current account deficit together with the unrecorded outflow, which resulted in an overall balance of payments surplus of \$5.3 million.

Outlook

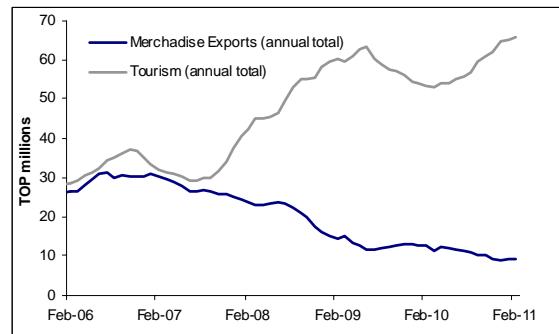

Foreign reserves are expected to fall in the next six months largely due to the expected rise in import payments underpinned by the increase in world oil and food prices as well as the expected pick up in economic activity. Nevertheless, the level of foreign reserves is expected to remain above the adequate level of 4.0 months of import cover as

the expected receipts of official foreign aid will ease the downward pressure on foreign reserves.

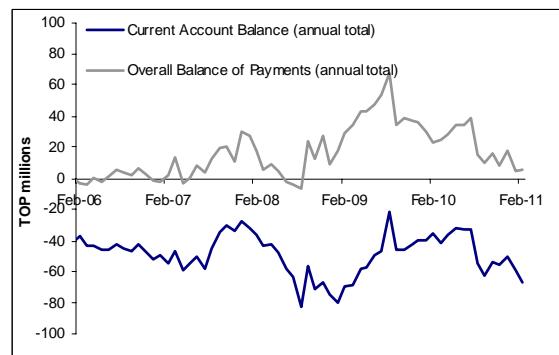

4.4 Remittances & Imports (12 months total)

4.5 Exports & Tourism (OET estimate)

4.6 Balance of Payments (OET estimate)

5. Promote Low and Stable Inflation

Inflation

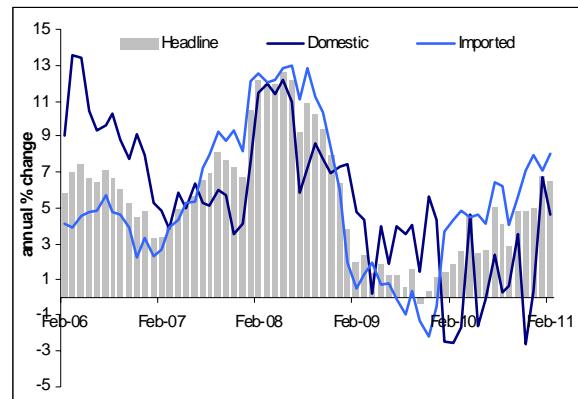

The Consumer Price Index (CPI) was rebased by the Statistics Department to October 2010 from November 2002 based on its Household Income Expenditure Survey (HIES) 2009 report. As a result, the weight of imported goods in the CPI was reduced to 58 percent from 66 percent while the domestic component increased to 42 percent from 34 percent.

The annual inflation rate increased significantly by 6.9 percent in the year ended January 2011 before easing to 6.5 percent in the year ended February 2011. This was higher compared to 4.2 percent rise in the year ended August 2010. The rise in the headline inflation in the past six months was mainly due to the increase in the prices of domestic and imported food as well as imported transportation.

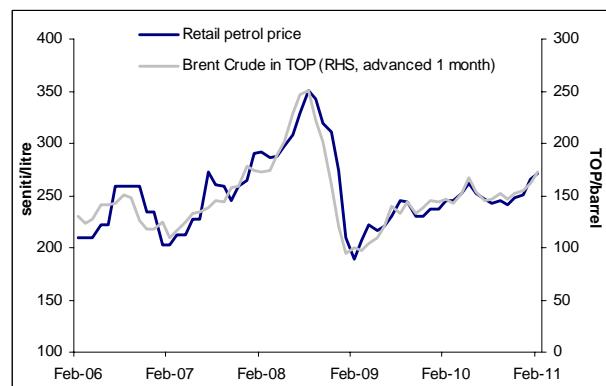

Imported inflation rose by 8.0 percent in the year ended February 2011 compared to 6.2 percent increase in the year ended August 2010. The increase in the imported inflation for the past six months was mainly driven by the increase in the price of imported transportation and to a lesser extent the price of imported food. The rise in the price of imported transportation reflected the increase in the world oil prices (Brent crude) from the average of US\$78 per barrel in August 2010 to the average of US\$100 per barrel in February 2011 which outweighed the appreciation in the Tongan pa'anga against the US dollar. The political unrest in the Middle East and North Africa, contributed to the rapid increase in the international oil prices. Furthermore, there are concerns that this political turmoil could spread to other countries in the region which may cause further disruption to oil supplies. The weakening of the Tongan pa'anga against the New Zealand dollar contributed to the rise in the price of imported food.

Domestic inflation rose by 6.7 percent in the year ended January 2011 before it fell to 4.7 percent in the year ended February 2011. This was higher compared to the 0.3 percent rise in the year ended August 2010. The increase in domestic inflation was largely due to the rise in the prices of local food mainly fruits, vegetables, meat, fish and poultry. The rise in the prices of local food reflected the shortage of supply and high demand for fruits and vegetables.

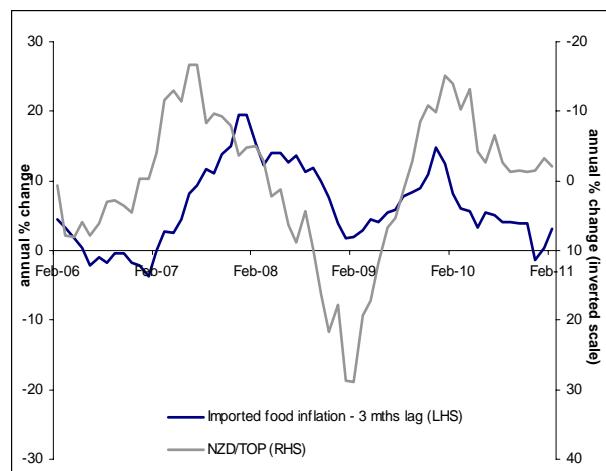

5.1 Inflation

5.2 World Oil Price (TOP) & Local Petrol Price

5.3 Imported food inflation & NZD

The average annual inflation rate rose to 4.4 percent in the year ended February 2011 from 2.3 percent in the year ended August 2010. This is the highest average annual inflation rate since July 2009 at 4.9 percent.

In underlying terms, which excludes imported food prices and energy prices, inflation rose by 5.2 percent in the year ended February 2011 compared to 2 percent rise in the year ended August 2010. The main driver for the increase in underlying inflation was the increase in the price of local food and to a lesser extent the increase in the price of imported tobacco and alcohol.

Outlook

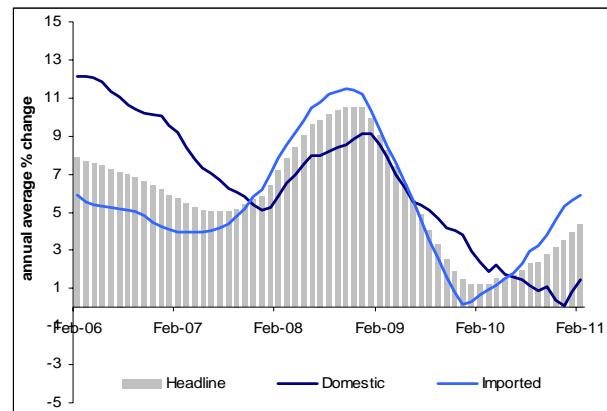

Inflation is projected to increase in the next six mainly on the back of rising world oil price and global food price.

Imported inflation is forecast to increase in the coming months due to higher world oil prices and rising global food prices. Furthermore, the impact of the natural disasters in New Zealand, Australia and Japan is likely to exert upward pressure on imported food prices.

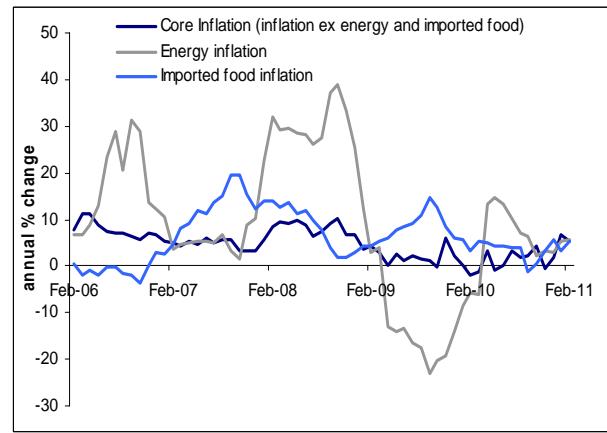

Domestic inflation, which is highly dependent on domestic food supply and fuel-related domestic goods and services, is expected to increase on the back of increasing world oil prices. Furthermore, domestic inflation is likely to increase, should the electricity price rise in the next three months.

Overall, it is expected that inflation will continue to increase in the next six months but will remain below double digits.

Appendix 1. Tongan Pa'anga exchange rates

Appendix 2. Monetary Policy Objectives

The NRBT's obligations with respect to monetary policy are laid out in Section 4 (1) of the National Reserve Bank of Tonga (Amendment) Act 2007, which state that the principal objectives of the Bank shall be to:

- (a) maintain internal and external monetary stability; and
- (b) promote a sound and efficient financial system;

Section 4 also states that the Reserve Bank will conduct its activities in a manner that supports macroeconomic stability and economic growth. In addition, Section 30 (2) of the Act gives the Reserve Bank the responsibility of maintaining an adequate level of foreign exchange reserves.

The Reserve Bank believes that it can best meet its responsibilities under the Act relating to monetary policy by maintaining internal and external monetary stability through maintaining official foreign exchange reserves and promoting price stability.

Maintaining an adequate level of foreign reserves is vital for a small open economy such as Tonga, which is dependent on imports for the supply of most of its goods which needs to be paid for in foreign currency. Given Tonga's vulnerability to external shocks and natural disasters, its small economy and narrow export base, and its dependence on imports, it is imperative that foreign reserves are maintained at adequate level to meet individuals' needs for basic essentials and support economic growth.

An adequate level of foreign reserves also minimizes volatility in the exchange rate and provides confidence that businesses and individuals in Tonga are able to meet their foreign currency obligations.

The Reserve Bank considers foreign reserves equivalent to 3 to 4 months of imports to be adequate.

Given the high component of imported goods in the CPI (58 percent), changes in the prices of imported goods and the exchange rate have a significant influence on the overall level of domestic prices.

Price stability contributes to economic welfare and sustainable economic development. Price stability also contributes to better economic performance. When inflation is low and stable it is easier for people to distinguish changes in relative prices and to adjust their decisions regarding consumption, saving, and investment accordingly. Importantly, an environment of stable prices also reduces risk in long-term financial agreements, as lenders and investors will be less likely to demand a high inflation risk premium to compensate for the loss of purchasing power. This reduces the costs to borrowers and increases the incentives for businesses to invest.

The high proportion of Tonga's exports and imports as a share of production mean that domestic prices are likely to move closely with the prices of traded goods, which in turn depends closely on the value of the exchange rate. Vulnerability to external shocks such as oil price increases, adverse weather conditions, high dependence on remittances and imports heighten the importance of promoting external stability, exchange rate stability and therefore overall price stability.

By promoting external stability through maintaining an adequate level of foreign reserves and promoting price stability, the NRBT through its conduct of monetary policy can most effectively contribute towards macroeconomic stability, sustained economic growth and raising prosperity for Tonga.
